Thanks John, and apologies for the sampling scope communication, I didn't find out until the crew was onsite that additional samples for water and radiation were being requested by my higher ups, but all we need is the sediment results if that is what we've got.

Please let me know if there is anything we can do to help you guys out, you're doing a great job on this, and you wouldn't know it from the bad press, but everyone I've talked to within the response teams and the community has nothing but compliments for the way EPA has responded to this.

Regards,

We are currently looking at a little over a one week turn-around for validated data. The Unified Command has to be the group to release the data.

John, thank you for your support in the sampling efforts at the Durango Pumping Plant intake structure, any word on when the results might be available? Thanks!
